Online Job Portal

Introduction

In the current scenario, there is a rat race in each and every professional field. It is also true for job market. A job portal is a website dedicated for online information about recruiters as well as job seekers.

SEEKING is a web application. The central concept of the application is to help both the job seekers and recruiters finding the right organization for the employees. In the case of job seekers, according to their educational qualification, experience and their preferences, the job portal shows the list of companies to the job seeker. And, to the recruiters, provides the suitable candidates from a pool of lacks the application. The system is designed with a three login, first is for the employee who can search for a job and can apply for it, Second is the recruiters who can post new job and can maintain both the posted job and the applied candidate list and third is the Admin who maintains and updates the information of the Job. The employee can view the complete specification of each job. The search engine provides an easy and convenient way to search for job-by-Job name and company name. If the employee wishes to apply for a particular job, then he/she can apply for it with his/her details and resume. The admin on the other end manages all the details regarding the employee, recruiter and the job. The admin maintains the applied candidate's information. The job seekers can view their applied job list. They can also build their resume here. They can also save their job. The Recruiters can select candidate after resume screening. There will be an advanced job filtering. The admin can add categories, and also add Resume templates for creating resumes.

EXISTING SYSTEM

The proposed system is a web-based application which allows applicants and employers to register their details. Applicants can browse through the vacancy details that are posted and can apply for the jobs online. Employers can browse through the posted resumes and select suitable candidates.

PROPOSED SYSTEM

Our proposed system provides help us to find job according to their interest. In this project there are three user modules: Admin, Job seekers and the recruiters. The admin manages both the jobseekers as well the recruiters, He also manages the posted job details and the applied candidate list. The Job Seekers can search for a job, view its details and also can apply for a job based on his/her interest. The Recruiters can post a new job anytime, He/she can view the posted job details as well as the applied candidate list.

MAIN FUNCTIONALITIES

Job Seeker Tools

- Advance Filters
- Job Alerts
- Job Save
- Resume Building

Employer Portal

- Resume Search
- Instant Messaging
- Advance Recruitment Job Portal Features
- Resume Screening

Admin Portal

- Adding Couse
- Adding job category
- Adding Resume Templates

Technology

Front End: HTML5, CSS3, Bootstrap

Back End: Python, PostgreSQL,nlp

WEEKLY PLAN

Each design of the frontend and backend are planned to be completed in each week.
